Stratatel releases leading edge mobile phone application for law firms

Sydney 13 August 2009: Australian software innovator Stratatel Limited (ASX:STE) has released next generation mobile phone technology **softlog.mobile** that captures and records billable time details which is automatically integrated into law firms' practice management system.

For the first time, the technology enables any professional spending time away from the office to capture, record and correctly allocate all their time to ensure full revenue recovery.

In fact, **softlog.mobile** provides a new and unique opportunity for professional services firms to generate additional revenue at a time when they are seeking ways to cut operating costs and save jobs.

According to softlog.mobile's chief executive Mr Matt Parry, "Market research found that there was increasing concern that existing technologies did not capture all the specific billing, client or case information required to ensure all billable time is recorded and accurately allocated.

"The research also found that very often information captured on mobile phones was not then fully integrated into the organisation's back office system and cost recovery processes," Mr Parry said.

With this in mind, Stratatel's innovation hubs in Perth and Brisbane developed **softlog.mobile** which not only captures all billable time and client details on all inbound and outbound calls, but also regularly and accurately updates individual client and case information necessary for full cost recovery.

"With more and more professionals using mobile phones to stay in contact with clients irrespective of whether they are in the office, the car, at home or even at the local kids football match, this breakthrough could not have come at a better time," Mr. Parry said.

About softlog.mobile

softlog.mobile™ is an application that installs on any BlackBerry handset, v4 or later, or any Nokia handset, Symbian S60 Rev 2 or later. Using softlog.mobile™ is a quick and easy procedure. When ending a call the user is prompted to allocate the call to either an account code (for charging back) or an internal cost centre, or to mark the call as

personal. Data from the handset is automatically fed into the practices' Softlog.Enterprise™ server for on-charging and statistical analysis purposes.

About Stratatel Softlog

Stratatel Softlog is part of Stratatel, an Australian publicly listed organisation providing specialised software solutions for asset, expense management and cost recovery. Software solutions include FleetManager®, CADS® and Softlog.Enterprise™. Softlog Services Pty Ltd was acquired by Stratatel in May 2007. Softlog has over 20 years experience with cost recovery in legal firms of every size in Australia.
