

PROGRAMMER

Stratatel Limited is an Australian publicly listed organisation established in 1997 to provide specialised software solutions for asset, expense management and cost recovery. Our products are designed to maximise efficiencies, reduce expenses, recover costs and ensure policy compliance is met in order to achieve corporate governance requirements. Stratatel Softlog is a division of Stratatel, specialising in software products for the professional market,

We are looking for an energetic, enthusiastic, self-motivated programmer who can work on both long-term development projects and short-term projects with a tight timeline. You will be able to work as part of a team, or independently as required.

The Position

The position we are offering is for a Delphi developer to join our Brisbane based development team, working on our range of cost management and control products. The job entails working on existing systems, performing system maintenance and enhancements, and for the right person, the opportunity to help create and work on brand new products and modules.

Required Skills

You will need to have 2 years commercial development experience using Delphi 5 and beyond. You will be able to demonstrate good abilities for documenting projects and code, and be familiar with version control systems. You will also require excellent communications skills and be able to demonstrate a willingness to learn. The opportunity exists to move into .NET and C# programming in the future.

The Salary

An attractive salary package in the range \$60-\$65k will be offered to the right person, including an opportunity to participate in the company's staff share plan.

To Apply: Please send a covering letter with your CV to mark.pickersgill@softlog.com.au

Please include an indication of your current salary.

Applications close: 23 November 2009
